

# Cisco ASR 9001 Router

## Product Overview

Part of the Cisco® ASR 9000 Series, the Cisco ASR 9001 Router (Figure 1) is a compact high-capacity Provider Edge (PE) router that delivers 120 Gbps of nonblocking, full-duplex fabric capacity in a two-rack-unit (2RU) form factor. Based on the same Cisco IOS® XR software image as the other routers in the Cisco ASR 9000 Series, the Cisco ASR 9001 Router delivers the features and services found on the ASR 9000 Series platforms, allowing customers to standardize on the same Cisco IOS XR image. The Cisco ASR 9001 Router has an Integrated Route Switch Processor (RSP) and two modular bays that support 1 GE, 10 GE, and 40 GE Modular Port Adapters (MPAs). The base chassis has four integrated 10 GE Enhanced Small Form-Factor Pluggable (SFP+) ports, a GPS input for stratum-1 clocking, Building Integrated Timing Supply (BITS) ports, and management ports.

Cisco ASR 9000 Series Aggregation Services Routers deliver exceptional scale, service flexibility, and high availability to Carrier Ethernet transport networks. The routers are powered by Cisco IOS XR Software, an innovative self-healing, distributed operating system designed for always-on operation. This is the same operating system that powers industry-leading routers such as the Cisco CRS Carrier Routing System, bringing the same reliability, scalability, performance, and comprehensive features that have made the Cisco CRS the dominant entity in the service provider core. Cisco IOS XR Software also allows for an end-to-end IP/MPLS solution to service provider requirements based on the same software, thereby reducing the operational complexity of managing multiple operating systems. The Cisco ASR 9000 Series further enhances the IP Next-Generation Network (IP NGN) Carrier Ethernet design for converged, resilient, intelligent, and scalable transport of consumer, business, wholesale, and mobile services.

Cisco ASR 9000 Series Carrier Ethernet applications include business services such as Layer 2 and Layer 3 VPN (L2VPN and L3VPN), IPTV, Content Delivery Networks (CDNs), mobile backhaul transport networks, and broadband network gateway (BNG). Features supported include Ethernet Services; L2VPN; IPv4, IPv6, and L3VPN; Layer 2 and Layer 3 multicast; IP over dense wavelength-division multiplexing (IPoDWDM), Synchronous Ethernet (SyncE), Ethernet operations, administration, and maintenance (EOAM) and MPLS OAM, Layer 2 and Layer 3 access control lists (ACLs), hierarchical quality of service (HQoS), MPLS Traffic Engineering Fast Reroute (MPLS TE-FRR), Multichassis Link Aggregation (MC-LAG), Integrated Routing and Bridging (IRB) and Cisco Nonstop Forwarding (NSF) and Nonstop Routing (NSR).

**Note:** Site to Site IPsec VPN is not currently supported on the ASR 9001 platform.

The integrated RSP has 8 GB RAM and is capable of holding several millions of routes, which makes the Cisco ASR 9001 Router useful as a dedicated route-reflector appliance.

Features and benefits of the Cisco ASR 9001 Router are listed in Table 1.

**Table 1.** Features and Benefits of Cisco ASR 9001 Router

Feature	Benefit
<b>Scalable fabric</b>	Designed to support high 1/10/40 Gigabit densities in a 2RU form factor Provides built-in scalability for investment protection
<b>Integrated port</b>	Four 10 GE services-enabled SFP+ ports
<b>Integrated route processor with 8 GB RAM</b>	Runs Cisco IOS XR, a carrier-class operating system with high memory capacity suitable for a dedicated route-reflector application
<b>Distributed forwarding plane architecture</b>	Allows MPA cards to support independent forwarding for enhanced performance and scale
<b>Control plane extension ports</b>	Two 10 G out-of-band Ethernet communications ports support Network Virtualization (nV) technology for high-availability cluster applications
<b>Hardware-based IEEE 1588 support</b>	Delivers timing services over the packet network efficiently and reliably
<b>Two independent clock source connections: BITS and Synchronization Supply Unit (SSU) with DOCSIS® Timing Interface (DTI)</b>	Offers redundant, centralized network synchronization support
<b>GPS</b>	Provides option for Stratum-1 clocking
<b>Embedded USB memory (eUSB) port</b>	Provides access to USB flash memory devices for software image loading and recovery
<b>Front-panel LEDs</b>	Provides visual indication of RSP status (active or standby), power management, and activity on compact flash and hard disk drive (HDD)
<b>Management ports</b>	Provides easy access to system console
<b>Power supply</b>	Redundant AC or DC power supplies

## Product Specifications

Table 2 provides details about the Cisco ASR 9001 Router. The system is designed for high performance and high reliability. The Cisco ASR 9001 has an integrated RSP capable of supporting fabric bandwidth up to 120 Gbps.
